TWIN-CAM SECURITY LOCK

C12 0509 Product by Roto

GROUPCO - C12 0509

TWIN-CAM SECURITY LOCK (TSL)

The exceptionally smooth action of the Twin-cam Security Lock is a testimony to its innovative design but that is not its major feature. The outstanding and unique characteristic is that every locking point incorporates twin mushroom cams which are operated by a gear mechanism which drives the twin cams in opposing directions allowing each cam to enter an individual recess situated at either side of the double entry striker. Suitable for timber and PVCu.

16mm mild steel faceplate, ROTOsil finish with die cast mazak lockcase, 43mm handle centres and 7mm steel follower.

- Lockcase depth – 27mm (20mm backset), 29mm (22mm backset)
- Lengths 300mm-1200mm
- Adjustable mushroom cams for sash compression
- Performs far in excess of the requirements of BS7950
- Mushroom cam travel 19mm
- Available with 8mm, 9.5mm or 10.5mm high cams
- Profile related striker plates with night ventilation
