DK 2003M SASH LIFTER

T2 0907

Building on the well established features of the DK2003 Tipsafe tilt before turn system, FUHR have now introduced an optional Sash Lifter to the range.

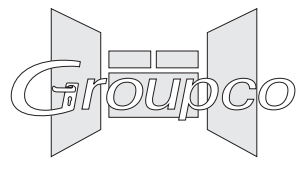

The Sash Lifter fits onto a revised tip unit and the sash with the sash lift arm locates onto a profile related Sash Lift roller plate on the frame. If any drop has occurred on the sash the sash lift arm lifts the sash as it closes and presents it into the frame with little or no unnecessary friction.

The handed product can be fitted as standard or retro-fitted requiring only the change of the tip unit.

Part No.	Description	Box Qty.
